

WHEELBUDDY SCANNER

The ScanBuddy[®] WheelBuddy brings easy accurate scanning from a small light weight encoder feedback scanning system.

The WheelBuddy consist of an encoder, a spring loaded magnetic wheel and an adjustable probe holder. The magnetic wheel is covered with a rubber tire.

The encoder body and probe holder is made from anodised aluminium.

Our scanner is made with the highest quality components, CNC machined and assembled in house. Nearly all spare components are mostly kept in stock, giving service and repair very quick turn around times.

Streamlined processes and productivity and in house manufacturing of most components ensure that we can deliver a product with high quality at a very competitive price.

Most ultrasonic and eddy-current machines are compatible with our system. The only requirement is a single encoder input. The scanner comes fitted with an encoder output on a 1.5m lead, with a HD 15 pin D-type connector and can fit most machines with an adaptor cable. Adaptor cables available at an additional cost.

Product comes with a 1 year limited warranty on manufacturing faults.

TECHNICAL SPECS

Size:	110x70x40mm
Weight:	100g
Encoder ppr:	4096 ppr
Wheel diameter:	35mm
Cable length:	1.5m
Connector:	HD DB 15
Max probe width:	40mm

Product might differ from images in this brochure.
